

# SOLENO OFFERS

## THE BEST SELECTION TOOL FOR THE BEST DRAINAGE PRODUCT

Based on the results of your soil test, discover a new, simple and efficient tool to help you choose the right kind of drainage product.

Available with three filter sizes: 100-micron, 250-micron and 450-micron openings.

## THE BEST PERFORMANCE

FOR FILTRATION AND PERMITTIVITY

**In responding to farmers' needs, Soleno understands the issues related to choosing the right drainage product. The elements that make a ground rich for large-scale agriculture complicates the selection of the perfect drain.**

In addition to our two filters sheaths, with 100-micron and 450-micron openings, Soleno is now the only company to offer a drainage product with 250-micron openings.

This new type of filter is offered for Type 2 and Type 3 (MEGA 3) drains.

**We recommend that you use the new MEGA 3 - 250 microns when your soil test clearly indicates a soil rich in fine and medium sand.**

**TYPE 2**

A drain with no filter is recommended in a soil containing more than 20% clay.

**TYPE 2 - 100 microns**

Recommended for installation in loamy soil with fine loam to very fine sand.

**MEGA 3 - 450 microns**

Recommended for installation in soil containing coarse sand to gravel.

## AVAILABLE TRAINING IN AGRICULTURAL DRAINAGE

Soleno provides training in agricultural drainage for farmers and agricultural installers who wish to learn about the benefits of agricultural drainage, execute drainage works or perform the work themselves. For a successful completion of a drainage project, one must understand the importance of good drainage and have a good knowledge of preparatory work, as well as the steps required and products to use.

Talk with our Customer Service people at 800.363.1471 and visit our Facebook page for our upcoming training courses.
