# DRAIN SUPPORT FOR FLEXIBLE AND RIGID PIPES

**Respects APCHQ standards** 

### **DESCRIPTION**

Plastic alignment bracket for drain. Designed to support and align the drain pipe in accordance with the 2010 Quebec Construction Code, Chapter 1 - Building, article 9.14.3.3., Paragraph 4, the technical sheets of series 3 of the APCHQ and the GCR sheets for flexible ducts and rigid (according to BNQ standard).

#### **BENEFITS**

- Ensures installation in accordance with the National Building Code as well as better quality control.
- Quebec innovation made from recycled materials.
- Prevents deviations from the drain causing inadequate drainage.
- Ensures adequate coverage of clean stones and better quality control of the backfill.

## RECOMMENDED USES AND INSTALLATION

#### 3 USES:

- 1. Installation of the flexible drain 6" from the footing
- 2. Installation of the rigid drain 8" from the center in case of iron ocher (according to BNQ standard)
- 3. Provides vertical support for drainage chimneys

Recommended installation: Spacing every 48 inches.

In the presence of uneven ground, a spacing of 24 inches is recommended.

**FIXATION:** Simply secure the drain bracket with 2 1-1/2" concrete nails.
